

MIDDLE-LEVEL CURRICULUM

A SYNERGISTIC SYSTEM

STANDARDS CORRELATION REPORT

Thursday, May 29, 2014

STANDARDS FROM

Virginia | Standards of Learning | Science (2003)

Grade Six,

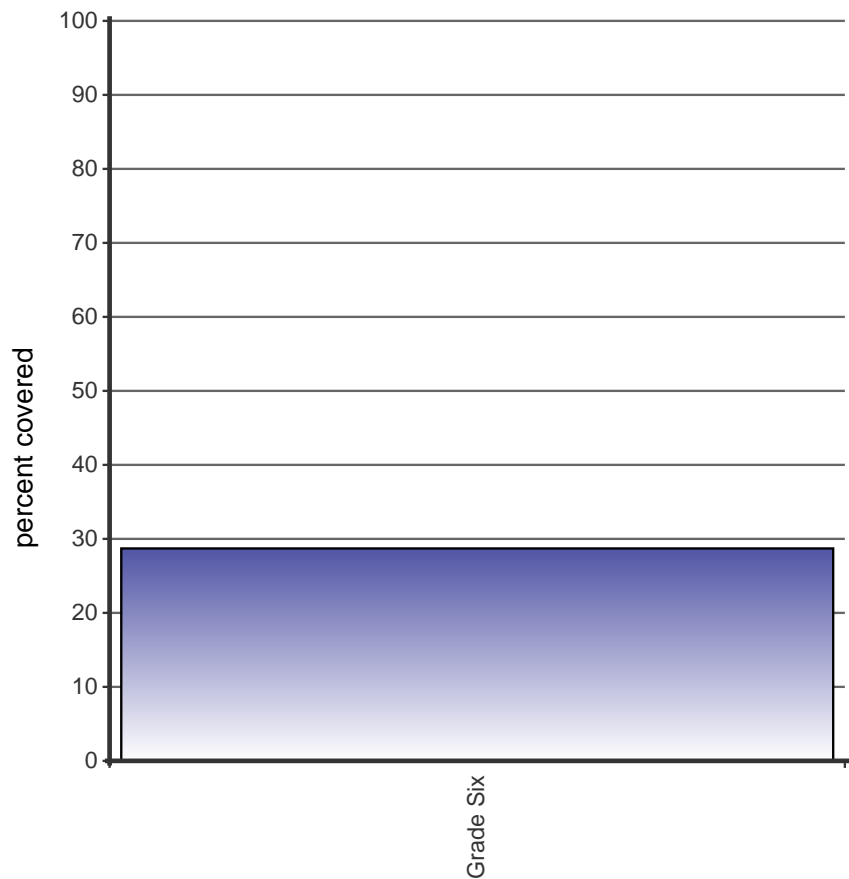

STANDARDS/BENCHMARKS ADDRESSED SUMMARY

How to Interpret:

When reviewing the "Standards/Benchmarks Addressed Summary, " all curriculum statements from your organization are considered in the accounting of items addressed. Under this reporting structure, if a child statement (bench mark) is considered "addressed," its parent statement (standard) is also considered addressed. in cases where there are three or more levels of statements (i'e.grandparent;parent;child),all levels above the lowest level that is addressed are also considered addressed .Reporting from this analysis consider each statement as being of equal value.

- Grade Six standards covered :22 of 77 (29%)

Standards/Benchmarks Addressed

BENCHMARKS ADDRESSED SUMMARY

How to Interpret:

Benchmarks are considered the statements at the lowest level of the document. When reviewing the "Benchmarks Addressed Summary," only the curriculum statements at the lowest level are being reported

- Grade Six standards covered :16 of 62 (26%)

Benchmarks Addressed

COVERAGE REPORTS ORGANIZED BY STANDARDS/BENCHMARK

This section of the reports lists each curriculum statement in the set chosen for this report and the titles that address them. Statements that are colored gray are not addressed by any title in the title set chosen for this report

Grade Six

- Grade Six standards covered :22 of 77 (29%)
- Grade Six standards covered :16 of 62 (26%)

	Grade Six Virginia Standards of Learning Science (2003)
	Scientific Investigation, Reasoning, and Logic
6.1	The student will plan and conduct investigations in which <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1 • Applied Physics 3.0.3
6.1.a	observations are made involving fine discrimination between similar objects and organisms;
6.1.b	a classification system is developed based on multiple attributes;
6.1.c	precise and approximate measures are recorded; <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1 • Applied Physics 3.0.3
6.1.d	scale models are used to estimate distance, volume, and quantity; <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1
6.1.e	hypotheses are stated in ways that identify the independent (manipulated) and dependent (responding) variables;
6.1.f	a method is devised to test the validity of predictions and inferences;

	Grade Six Virginia Standards of Learning Science (2003)
6.1.g	one variable is manipulated over time with many repeated trials;
6.1.h	data are collected, recorded, analyzed, and reported using appropriate metric measurement; <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1 • Applied Physics 3.0.3
6.1.i	data are organized and communicated through graphical representation (graphs, charts, and diagrams);
6.1.j	models are designed to explain a sequence; and <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1
6.1.k	an understanding of the nature of science is developed and reinforced. <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1 • Applied Physics 3.0.3
	Force, Motion, and Energy
6.2	The student will investigate and understand basic sources of energy, their origins, transformations, and uses. Key concepts include <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1 • Applied Physics 3.0.3
6.2.a	potential and kinetic energy;
6.2.b	the role of the sun in the formation of most energy sources on Earth; <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1
6.2.c	nonrenewable energy sources (fossil fuels, including petroleum, natural gas, and coal);

	Grade Six Virginia Standards of Learning Science (2003)
6.2.d	renewable energy sources (wood, wind, hydro, geothermal, tidal, and solar); and
6.2.e	energy transformations (heat/light to mechanical, chemical, and electrical energy). <ul style="list-style-type: none"> • Applied Physics 3.0.3
6.3	The student will investigate and understand the role of solar energy in driving most natural processes within the atmosphere, the hydrosphere, and on the Earth's surface. Key concepts include <ul style="list-style-type: none"> • Applied Physics 3.0.3
6.3.a	the Earth's energy budget;
6.3.b	the role of radiation and convection in the distribution of energy; <ul style="list-style-type: none"> • Applied Physics 3.0.3
6.3.c	the motion of the atmosphere and the oceans;
6.3.d	cloud formation; and
6.3.e	the role of heat energy in weather-related phenomena including thunderstorms and hurricanes.
	Matter
6.4	The student will investigate and understand that all matter is made up of atoms. Key concepts include
6.4.a	atoms are made up of electrons, protons, and neutrons;
6.4.b	atoms of any element are alike but are different from atoms of other elements;
6.4.c	elements may be represented by chemical symbols;
6.4.d	two or more atoms may be chemically combined;
6.4.e	compounds may be represented by chemical formulas;

	Grade Six Virginia Standards of Learning Science (2003)
6.4.f	chemical equations can be used to model chemical changes; and
6.4.g	a limited number of elements comprise the largest portion of the solid Earth, living matter, the oceans, and the atmosphere.
6.5	The student will investigate and understand the unique properties and characteristics of water and its roles in the natural and human-made environment. Key concepts include
6.5.a	water as the universal solvent;
6.5.b	the properties of water in all three states;
6.5.c	the action of water in physical and chemical weathering;
6.5.d	the ability of large bodies of water to store heat and moderate climate;
6.5.e	the origin and occurrence of water on Earth;
6.5.f	the importance of water for agriculture, power generation, and public health; and
6.5.g	the importance of protecting and maintaining water resources.
6.6	The student will investigate and understand the properties of air and the structure and dynamics of the Earth's atmosphere. Key concepts include
6.6.a	air as a mixture of gaseous elements and compounds;
6.6.b	air pressure, temperature, and humidity;
6.6.c	how the atmosphere changes with altitude;
6.6.d	natural and human-caused changes to the atmosphere;
6.6.e	the relationship of atmospheric measures and weather conditions;
6.6.f	basic information from weather maps including fronts, systems, and basic measurements; and
6.6.g	the importance of protecting and maintaining air quality.

	Grade Six Virginia Standards of Learning Science (2003)
	Living Systems
6.7	The student will investigate and understand the natural processes and human interactions that affect watershed systems. Key concepts include
6.7.a	the health of ecosystems and the abiotic factors of a watershed;
6.7.b	the location and structure of Virginia's regional watershed systems;
6.7.c	divides, tributaries, river systems, and river and stream processes;
6.7.d	wetlands;
6.7.e	estuaries;
6.7.f	major conservation, health, and safety issues associated with watersheds; and
6.7.g	water monitoring and analysis using field equipment including hand-held technology.
	Interrelationships in Earth/Space Systems
6.8	The student will investigate and understand the organization of the solar system and the relationships among the various bodies that comprise it. Key concepts include
6.8.a	the, sun, moon, Earth, other planets and their moons, meteors, asteroids, and comets; <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1
6.8.b	relative size of and distance between planets; <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1
6.8.c	the role of gravity; <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1

	Grade Six Virginia Standards of Learning Science (2003)
6.8.d	revolution and rotation; <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1
6.8.e	the mechanics of day and night and phases of the moon; <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1
6.8.f	the unique properties of Earth as a planet; <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1
6.8.g	the relationship of the Earth's tilt and seasons; <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1
6.8.h	the cause of tides; and <ul style="list-style-type: none"> • Astronomy 3.1.1 • Astronomy Math 3.1.1
6.8.i	the history and technology of space exploration.
	Resources
6.9	The student will investigate and understand public policy decisions relating to the environment. Key concepts include
6.9.a	management of renewable resources (water, air, soil, plant life, animal life);
6.9.b	management of nonrenewable resources (coal, oil, natural gas, nuclear power, mineral resources);
6.9.c	the mitigation of land-use and environmental hazards through preventive measures; and
6.9.d	cost/benefit tradeoffs in conservation policies.

COVERAGE REPORT ORGANIZED BY PRODUCT TITLE

This section of the reports lists each curriculum statement in the set chosen for this report and the titles that address them .Statements that are colored gray are not aaddressed by any title in the title set chosen for this report

Astronomy 3.1.1

- Grade Six standards covered :19 of 77 (25%) (16 unique)

Grade Six

	Grade Six Virginia Standards of Learning Science (2003)
6.1	The student will plan and conduct investigations in which
*6.1.c	precise and approximate measures are recorded;
*6.1.d	scale models are used to estimate distance, volume, and quantity;
*6.1.h	data are collected, recorded, analyzed, and reported using appropriate metric measurement;
*6.1.j	models are designed to explain a sequence; and
*6.1.k	an understanding of the nature of science is developed and reinforced.
*6.2	The student will investigate and understand basic sources of energy, their origins, transformations, and uses. Key concepts include
*6.2.b	the role of the sun in the formation of most energy sources on Earth;
*6.8.a	the, sun, moon, Earth, other planets and their moons, meteors, asteroids, and comets;
*6.8.b	relative size of and distance between planets;
*6.8.c	the role of gravity;

	Grade Six Virginia Standards of Learning Science (2003)
*6.8.d	revolution and rotation;
*6.8.e	the mechanics of day and night and phases of the moon;
*6.8.f	the unique properties of Earth as a planet;
*6.8.g	the relationship of the Earth's tilt and seasons;
*6.8.h	the cause of tides; and

Astronomy Math 3.1.1

- Grade Six standards covered :19 of 77 (25%) (16 unique)

Grade Six

	Grade Six Virginia Standards of Learning Science (2003)
6.1	The student will plan and conduct investigations in which
*6.1.c	precise and approximate measures are recorded;
*6.1.d	scale models are used to estimate distance, volume, and quantity;
*6.1.h	data are collected, recorded, analyzed, and reported using appropriate metric measurement;
*6.1.j	models are designed to explain a sequence; and
*6.1.k	an understanding of the nature of science is developed and reinforced.
*6.2	The student will investigate and understand basic sources of energy, their origins, transformations, and uses. Key concepts include
*6.2.b	the role of the sun in the formation of most energy sources on Earth;
*6.8.a	the, sun, moon, Earth, other planets and their moons, meteors, asteroids, and comets;

	Grade Six Virginia Standards of Learning Science (2003)

*6.8.e	the mechanics of day and night and phases of the moon;
*6.8.f	the unique properties of Earth as a planet;
*6.8.g	the relationship of the Earth's tilt and seasons;
*6.8.h	the cause of tides; and

Applied Physics 3.0.3

- Grade Six standards covered :10 of 77 (13%) (8 unique)

Grade Six

	Grade Six Virginia Standards of Learning Science (2003)
6.1	The student will plan and conduct investigations in which
*6.1.c	precise and approximate measures are recorded;
*6.1.h	data are collected, recorded, analyzed, and reported using appropriate metric measurement;
*6.1.k	an understanding of the nature of science is developed and reinforced.
*6.2	The student will investigate and understand basic sources of energy, their origins, transformations, and uses. Key concepts include
*6.2.e	energy transformations (heat/light to mechanical, chemical, and electrical energy).
*6.3	The student will investigate and understand the role of solar energy in driving most natural processes within the atmosphere, the hydrosphere, and on the Earth's surface. Key concepts include

	Grade Six Virginia Standards of Learning Science (2003)
*6.3.b	the role of radiation and convection in the distribution of energy;

STANDARDS/BENCHMARKS NOT ADDRESSED SUMMARY

This section of the report shows all standards that are not addressed by the set of titles used to create this report

Grade Six

	Grade Six Virginia Standards of Learning Science (2003)
	Scientific Investigation, Reasoning, and Logic
6.1.a	observations are made involving fine discrimination between similar objects and organisms;
6.1.b	a classification system is developed based on multiple attributes;
6.1.e	hypotheses are stated in ways that identify the independent (manipulated) and dependent (responding) variables;
6.1.f	a method is devised to test the validity of predictions and inferences;
6.1.g	one variable is manipulated over time with many repeated trials;
6.1.i	data are organized and communicated through graphical representation (graphs, charts, and diagrams);
	Force, Motion, and Energy
6.2.a	potential and kinetic energy;
6.2.c	nonrenewable energy sources (fossil fuels, including petroleum, natural gas, and coal);
6.2.d	renewable energy sources (wood, wind, hydro, geothermal, tidal, and solar); and
6.3.a	the Earth's energy budget;
6.3.c	the motion of the atmosphere and the oceans;
6.3.d	cloud formation; and

	Grade Six Virginia Standards of Learning Science (2003)
6.3.e	the role of heat energy in weather-related phenomena including thunderstorms and hurricanes.
	Matter
6.4	The student will investigate and understand that all matter is made up of atoms. Key concepts include
6.4.a	atoms are made up of electrons, protons, and neutrons;
6.4.b	atoms of any element are alike but are different from atoms of other elements;
6.4.c	elements may be represented by chemical symbols;
6.4.d	two or more atoms may be chemically combined;
6.4.e	compounds may be represented by chemical formulas;
6.4.f	chemical equations can be used to model chemical changes; and
6.4.g	a limited number of elements comprise the largest portion of the solid Earth, living matter, the oceans, and the atmosphere.
6.5	The student will investigate and understand the unique properties and characteristics of water and its roles in the natural and human-made environment. Key concepts include
6.5.a	water as the universal solvent;
6.5.b	the properties of water in all three states;
6.5.c	the action of water in physical and chemical weathering;
6.5.d	the ability of large bodies of water to store heat and moderate climate;
6.5.e	the origin and occurrence of water on Earth;
6.5.f	the importance of water for agriculture, power generation, and public health; and
6.5.g	the importance of protecting and maintaining water resources.

	Grade Six Virginia Standards of Learning Science (2003)
6.6	The student will investigate and understand the properties of air and the structure and dynamics of the Earth's atmosphere. Key concepts include
6.6.a	air as a mixture of gaseous elements and compounds;
6.6.b	air pressure, temperature, and humidity;
6.6.c	how the atmosphere changes with altitude;
6.6.d	natural and human-caused changes to the atmosphere;
6.6.e	the relationship of atmospheric measures and weather conditions;
6.6.f	basic information from weather maps including fronts, systems, and basic measurements; and
6.6.g	the importance of protecting and maintaining air quality.
	Living Systems
6.7	The student will investigate and understand the natural processes and human interactions that affect watershed systems. Key concepts include
6.7.a	the health of ecosystems and the abiotic factors of a watershed;
6.7.b	the location and structure of Virginia's regional watershed systems;
6.7.c	divides, tributaries, river systems, and river and stream processes;
6.7.d	wetlands;
6.7.e	estuaries;
6.7.f	major conservation, health, and safety issues associated with watersheds; and
6.7.g	water monitoring and analysis using field equipment including hand-held technology.
	Interrelationships in Earth/Space Systems

	Grade Six Virginia Standards of Learning Science (2003)
6.8	The student will investigate and understand the organization of the solar system and the relationships among the various bodies that comprise it. Key concepts include
6.8.i	the history and technology of space exploration.
	Resources
6.9	The student will investigate and understand public policy decisions relating to the environment. Key concepts include
6.9.a	management of renewable resources (water, air, soil, plant life, animal life);
6.9.b	management of nonrenewable resources (coal, oil, natural gas, nuclear power, mineral resources);
6.9.c	the mitigation of land-use and environmental hazards through preventive measures; and
6.9.d	cost/benefit tradeoffs in conservation policies.
